Dear Wojciech,

On behalf of Center for Computation and Technology (CCT) at Louisiana State University, I have a pleasure to invite you for a summer visit at our research center in the months of July and August 2008. During your visit you will be able to get involved in XymbiOS description, specification, and software architecture. This new approach represents a strategy of simplicity and synergy of multiplicity of agents to achieve complexity and dynamic adaptivity of operation. You will play a formative and creative role in this as you bring your much valued practical experience with real world kernels. As you know, the group you will collaborate with is supervised by Prof. Thomas Sterling (<http://www.cct.lsu.edu/~tron/>).

CCT will cover the cost of your travel and accommodation in Baton Rouge, as well cost of living. Please do not hesitate to contact me, if you have any further questions. My cell phone number is 225-362-2548. We are looking forward to seeing you in Baton Rouge.

With kindest regards,

Jaroslaw Nabrzyski
Executive Director
Center for Computation and Technology
